Science

This half term we would have moved onto looking at **light**.

How many different shadows can you make by using a torch/ light, a flat surface and different objects?

How do shadows change when the difference between the light source and the object changes?

Carry out an investigation and record it in the table below.

Equipment: Draw the things you will use to carry out your investigation.	Step 1 - How will you make a shadow using your equipment?	Step 2 - How will you measure the distance of the object from the light source, and the size of the shadow?
Step 3 - How will you measure what happens to the shadow when you move the object away from the light source?	Step 4 - How will you record your results?	Prediction: What do you think will happen? How

Remember

- The history learning project is on the website
- There is a new geography project for this half term
- You have key words to practise reading and spelling – you can make your own doodle spellings
- You have a list of online learning sites you can use
- Children were given their own login to use Education City
- You have Times Tables Rock Stars logins and there are certificates up for grabs!
