

Science Principles

- *We are engaged in science lessons, showing passion and enthusiasm*
- *We can use practical enquiries to answer scientific questions and can record findings in different ways*
 - *We can link science to our own experiences and everyday life*
- *We can use scientific vocabulary and develop this through discussions, asking questions and application*
- *We can use a range of equipment correctly and accurately and we build upon this as learning progresses*
- *We can initiate and explore scientific ideas independently, with time to reflect upon findings to address any misconceptions*
